Mixing Secrets of the Pros

The 5 Primary Mixing Tools

Presented by Fett
Azalea Music Group
Nashville

2020 TAXI Road Rally © 2020 by Fett, Azalea Music Group, Nashville

Strongly recommended…

W E A R
H E A D P H O N E S !!

2020 TAXI Road Rally © 2020 by Fett, Azalea Music Group, Nashville

The ultimate goal of mixing…

- To *connect emotionally* with the *end listener*.
- By "taking them on a *journey*"
  - A mix has a "story flow" – a *progression* – just like the lyrics of a song
- PRO SECRET ALERT!!!
  It all starts with *effective use of the 5 Primary Mixing Tools*
  - From *Fett's Mixing Roadmap* book, "Core Mix" chapter
  - And *Fett's Mixing Mastery* online video course

2020 TAXI Road Rally © 2020 by Fett, Azalea Music Group, Nashville

The 5 Primary Mixing Tools

1. Volume *levels*
2. Stereo *panning*
3. *Tone* shaping (aka “EQ”)
4. *Dynamics* control (aka compression & limiting)
5. *Time-based effects* (e.g., reverb and delay)

 © 2020 by Fett, Azalea Music Group, Nashville

Primary Mixing Tool #1: **Volume Levels**

- Relative starting levels between parts
- Changes in level throughout the course of the mix
  - Between parts
  - Within a given part
  - Between different sections of the song
- MUTING (i.e., sometimes the best level is no level at all)
- Accomplished today through VOLUME AUTOMATION

 © 2020 by Fett, Azalea Music Group, Nashville

Pro secret #1: **Fader Riding**

- One of THE biggest differences between pro & not-so-pro mixes
  - Too much compression
  - Not enough volume automation
  - ESPECIALLY WITH VOCALS!!!
- Can be used for ANY parts
  - That's how we create the EMOTIONAL EBB AND FLOW in a mix

Primary Mixing Tool #2: **Stereo Panning**

- Also called “placement”
- Good placement of relative *positions* of parts and sections
  - E.g., spacing of players on a “Virtual Stage”
- Similar to fader riding, judicious stereo *movement* enhances emotional ebb and flow
  - But don’t overdo it!

 © 2020 by Fett, Azalea Music Group, Nashville

Pro secret #2: **Wider Panning**

- Panning seriously affects perceived volume and our brains' ability to "localize" a sound
  - The further away from center, the more we can localize
- Often more effective than volume changes!
- Good guideline: Fett's 3 zones:
  - Center to 32
  - 32 to 62
  - 62 to 100 (HARD L or R)
- Relative volumes typically need to be adjusted after panning because of *perceived* level (and DAW's "pan law")

Primary Mixing Tool #3: **Tone Shaping**

- Also known as “EQ”
- Sometimes it’s the ONLY “processing” you need on a part
- Just as with panning, want to give each part and sections its own “EQ Zone”

 © 2020 by Fett, Azalea Music Group, Nashville

Pro secret #3: **EQ Flipping**

- Example: making two EXACT SAME guitar parts sound different and “anchor” a mix
  - Boost and cut 2 frequencies on Guitar 1
  - Cut and boost same 2 frequencies on Guitar 2
  - Voila! Each guitar part “stands out” and “owns” its own EQ Zone
    - Each might sound like crap in solo, but it’s their *place in the mix* that matters
- Technique can be used with anything, including dissimilar instruments (e.g., guitar & keyboards)

Primary Mixing Tool #4: **Dynamics Control**

- Generally compression & limiting
- THE BIGGEST problem I hear with “not-so-pro” mixes is TOO MUCH COMPRESSION done ALL AT ONCE
- Squashes the mix and sucks the life (i.e., emotional content) right out of it
- Law of diminishing returns

 © 2020 by Fett, Azalea Music Group, Nashville

Pro secret #4: **Compress** in **Multiple Steps.**

- A stepped or stacked approach, (Rather than all at once)
- Example:
  - Instead of compressing a part (vocal, guitar, snare) at 10:1 and/or extremely low threshold, compress **multiple times** at 3:1 and/or a higher threshold

Primary Mixing Tool #5: **Time-based Effects**

- Generally reverb & delay, chorus/flange
- THE BIGGEST problem I hear is TOO MUCH REVERB
  - Often the result of not taking “downline compression” in the production process (e.g., master bus processing, mastering) into account

 © 2020 by Fett, Azalea Music Group, Nashville

Pro secret #5: **Position Reverb to same Location as Source**

- Helps to avoid “wash” of reverb in mix/master, improves listener “localization” of parts
- How to do it (e.g., for 2 guitars)
  - Instead of using a single, common Send reverb, create multiple Send reverbs of the same type
  - Assign each part to 1 of the reverbs
  - Pan each reverb to same stereo position as the part that is feeding it
- Uses more computer resources (memory & processor), but…
  - Well worth it for CLARITY it brings to the mix
  - More room for EMOTION to come through! ☺

TAXI Road Rally 2020 Bonus Material

More of Fett's Mixing Philosophy & Approach

2020 TAXI Road Rally © 2020 by Fett, Azalea Music Group, Nashville

Fett's Mixing Philosophy and Approach…

- Fett's "*7 Stages of Mixing*"

1. Environment setup
2. Mix setup and maintenance
3. Core mix
4. Iterative adjustment and automation
5. Master bus processing and tweaksw
6. Multi-environment listening and final tweaks
7. Wrap-up and housekeeping

Fett's Mixing Philosophy and Approach…

- Just like a song, a mix should be a *journey*!
- Mixing is not about *tracks*; it's about *musical arrangement* and *parts*!
- Mixing is a LOT easier if *left-brain* and *right-brain* tasks are done separately!
- There's a lot more than just *volume* to "place" a part in a mix! (Use Fett's "*5 Primary Mixing Tools*")

2020 TAXI Road Rally © 2020 by Fett, Azalea Music Group, Nashville

Fett's Mixing Philosophy and Approach…

- Mixes that sound great on *speakers* will usually sound killer on *headphones* or *earbuds* … but rarely the other way around!
- Mixes that sound great at *low volume* will usually sound killer *loud* … but rarely the other way around!
- Our *ears* (and our *brains*) need regular *breaks*!
- Killer secret: *Layering* (aka Fett's "6th Primary Mixing Tool")
